Can you connect lithium batteries in parallel?

Ensure that the lithium batteries you intend to connect in parallel have the same voltage and SOC. Mixing batteries with different specifications can lead to imbalanced charging and discharging, which is unsafe. Batteries that are at different SOC should be charged or discharged to within 0.25 volts to prevent damage due to excessive current.

How to balance lithium batteries in parallel?

Balancing lithium batteries in parallel involves measuring each battery's voltage before connection, ensuring they're within an acceptable range of each other, and then connecting all positive and negative terminals together. [What Does It Mean For Lithium Batteries To Be Balanced?](#)

Can a 12V lithium battery be connected in series?

Yes, you can connect 12V lithium batteries in series. When you do, the voltages of each battery will add up. For instance, if you connect two 12V lithium batteries in series, you will get a total voltage of 24V. [Can I connect 12V lithium in parallel?](#) Yes, you can connect 12V lithium batteries in parallel.

Should lithium ion batteries be wired in series or parallel?

When wiring lithium-ion batteries in series, the voltage is changed which can damage equipment if not performed with caution and great understanding. In contrast, wiring lithium batteries in parallel keeps the voltage the same while simply giving the batteries the ability to supply that same voltage level for longer.

How many amps can a lithium ion battery handle?

Secondly, while there are some very high current capacity cells out there, most lithium-ion battery cells can only handle 5 to 15 amps of current. For these two reasons, it's important to know how to wire lithium batteries in parallel, as it increases both capacity and current carrying capability.

What is a parallel battery connection?

**Parallel Connection** In a parallel connection, the batteries are linked side-by-side. This configuration keeps the voltage the same but increases the capacity. For instance, connecting two 3.7V 100mAh lithium cells in parallel will result in a total capacity of 200mAh while maintaining the voltage at 3.7V.
