

Adhesive strips for perovskite solar cells

Can conductive adhesive modify SnO_2 /perovskite interface?

In this study, $\text{C}_6\text{H}_5\text{K}_3\text{O}_7$ was introduced as a conductive adhesive to modify the SnO_2 /perovskite interface.

Are carbon electrodes suitable for stable perovskite solar cells?

Abstract Carbon electrode are a low-cost and great potential strategy for stable perovskite solar cells (PSCs). However, the efficiency of carbon-based PSCs lags far behind compared with that of st...

How do oxygen vacancies affect perovskite solar cells?

Oxygen vacancies on the surface of the electron transport layer (ETL) can distort the perovskite structure near the interface, inducing unfavorable phases, and, the surface chemical modification of the ETL plays a key role for the efficiency and stability of perovskite solar cells (PSCs). In this study, C_6H_5

How do polar molecule groups react with perovskite?

The polar molecule group ($-\text{C}_6\text{H}_5\text{O}_7$) could react with the perovskite to trigger heterogeneous nucleation over the perovskite precursor film for a high-quality perovskite, which not only decreases the bulk defects, but also interacts with excess PbI_2 to passivate the interface defect.

Can a self-adhesive macroporous carbon film be used as a counter electrode?

The poor interface contact between the carbon electrode and the underlying layer dominates the performance loss of the reported carbon-based PSCs. In this respect, a sort of self-adhesive macroporous carbon film is developed as counter electrode by a room-temperature solvent-exchange method.

A group of scientists from Germany's Fraunhofer Institute for Solar Energy Systems (Fraunhofer ISE), with support from Oxford PV Germany, have examined shingling ...

Utilizing carbon-laminated electrodes on perovskite solar cells (PSCs) ...

Germany-based adhesive technology supplier Panacol has launched Elecolit 3648, a conductive adhesive for making flexible electrical contacts on temperature-sensitive organic photovoltaic (OPV)...

Press Release. ESPResSo, an Ambitious EU Funded Collaboration to Make Perovskite Solar Cells a Market Reality. LEUVEN, April 17, 2018 - Imec, the world-leading ...

Perovskite solar cells (PSCs) have been developed rapidly in the past decade, with their record power conversion efficiency (PCE) now exceeding 26%. While gold (Au) ...

Here, we employ PEDOT:PSS as a silver-free, intrinsically conductive adhesive (ICA) to create an

interconnect between solar cells. The fundamental hypothesis is that ...

Perovskite solar cells (PSCs) are arising as strong candidates for the next generation of thin-film photovoltaic techniques due to their high efficiency, low-cost, and simple manufacture process ...

Herein, polyaniline is employed as a conductive adhesive, enabling ...

Here, we employ PEDOT:PSS as a silver-free, intrinsically conductive ...

The recently emerged perovskite solar cells (PSCs) with hybrid organic-inorganic perovskite halides, $\text{CH}_3\text{NH}_3\text{PbX}_3$ ($X = \text{Cl}, \text{Br}, \text{I}$) as the active layer, have generated over ...

A group of scientists led by the Sharif University of Technology in Iran developed a new conductive adhesive ink that can be used as an interfacial adhesive layer in perovskite solar...

In this work, a modified polyurethane adhesive (PUA) was prepared to realize a convenient encapsulation strategy for lead sedimentation and attachable perovskite solar cells (A-PSCs). ...

A group of scientists led by the Sharif University of Technology in Iran developed a new conductive adhesive ink that can be used as an interfacial adhesive layer in perovskite ...

Epoxy-based adhesive emerges as a robust solution for flexible perovskite solar cell encapsulation, showcasing excellent performance even under thermal stress. Novel ...

Utilizing carbon-laminated electrodes on perovskite solar cells (PSCs) benefits from simple fabrication process and low-cost material, in addition to enhanced stability. In this ...

DOI: 10.1016/J.MTCOMM.2019.05.013 Corpus ID: 182919479; Efficiency and stability enhancement of organic-inorganic perovskite solar cells through micropatterned Norland ...

These carbon pastes systems are compatible with perovskite PV cells and can be processed at low temperature (<100 deg.C). They provide excellent long term stability and offer a low cost ...
