

Analysis of price trend of power-consuming batteries

What are the factors affecting battery market growth?

Over the long term, factors such as the declining lithium-ion battery prices and the growing usage of automotive batteries in electric vehicles are expected to drive the market. On the flip side, a mismatch in the demand and supply of raw materials for battery manufacturing is likely to hinder the market growth.

What are the development trends of power batteries?

3. Development trends of power batteries 3.1. Sodium-ion battery (SIB) exhibiting a balanced and extensive global distribution. Correspondingly, the price of related raw materials is low, and the environmental impact is benign. Importantly, both sodium and lithium ions, and -3.05 V, respectively.

What is the global battery market forecast?

The Battery Market is expected to register a CAGR of 16.64% during the forecast period. The global battery market is estimated to reach a value of USD 132.44 billion by the end of this year. The market was negatively impacted by COVID-19 in 2020. Currently, it has reached pre-pandemic levels.

How has battery quality changed over the past 30 years?

As volumes increased, battery costs plummeted and energy density -- a key metric of a battery's quality -- rose steadily. Over the past 30 years, battery costs have fallen by a dramatic 99 percent; meanwhile, the density of top-tier cells has risen fivefold.

Why did battery demand increase in 2023 compared to 2022?

In the rest of the world, battery demand growth jumped to more than 70% in 2023 compared to 2022, as a result of increasing EV sales. In China, PHEVs accounted for about one-third of total electric car sales in 2023 and 18% of battery demand, up from one-quarter of total sales in 2022 and 17% of sales in 2021.

What happened to battery metal prices in 2022?

Turmoil in battery metal markets led the cost of Li-ion battery packs to increase for the first time in 2022, with prices rising to 7% higher than in 2021. However, the price of all key battery metals dropped during 2023, with cobalt, graphite and manganese prices falling to lower than their 2015-2020 average by the end of 2023.

Our researchers forecast that average battery prices could fall towards \$80/kWh by 2026, amounting to a drop of almost 50% from 2023, a level at which battery electric ...
