

# Argentina wind power project energy storage policy

Does Argentina still have a wind power market?

Despite its great wind endowment, Argentina has not still succeeded in increasing wind power share in its wholesale market. However, the energy supply problem that this country is facing from 2004 on seems to open an opportunity for wind energy projects. A wide range of legislation has recently emerged.

Why is wind power important in Argentina?

Wind power is a clean energy source that does not produce greenhouse gas emissions. By switching from fossil fuels to wind power, Argentina can significantly reduce its carbon emissions, contributing to global efforts to combat climate change. In addition, the development of the wind energy sector can also create jobs and stimulate local economies.

Can a wind farm be profitable in Argentina?

When market prices are high, wind projects are attractive. In a frame of low energy prices, no investments come about. According to the results obtained in section four, the current economic feasibility of a wind farm in Argentina is not good enough. The profitability relies on both market energy prices and external financing.

How has the Argentine government relaunched the renewable sector?

IN ARGENTINA National Law 27.191 of 2015 sets a mandate to in the Argentine government has been implementing new procurement schemes that have revitalized the renewable sector in general and the wind power sector in particular. 3.7 GW of wind power capacity. 63 projects. USD 5 billion in i

What is Argentina's energy policy?

1. Policy Argentina has a target to reach 8% of renewable electricity generation by 2016, established in 2006 by Law 26190. In order to reach its target, in 2009 Argentina launched an auction through its national energy company (ENARSA).

How much does a wind generator cost in Argentina?

For a price of 300 Argentinean pesos by MWh, the wind generator's final fee is 0.076 US\$/kWh. According to AAEO and NOWA the wind power fee should be about 0.09 US\$/kWh. However, in the scenery 2 the IRR is good enough for the project to be accepted. Nevertheless, the social and economic impact of such an increase in power price could be huge.

Argentina currently imports 20-30% of its annual consumption of natural gas while it holds some of the world largest shale gas reserves in Vaca Muerta and other plays yet unexplored.

Of the projects inaugurated in 2021, 42.3% corresponded to wind technology, 30.8% to bioenergy, 15.4% to solar photovoltaic and 11.5% to small hydropower (SHP). These ...
