Mobile phones, tablets, the TV remote and torches all use batteries. Some batteries are rechargeable so they can be used again and again.

What are the risks associated with battery power?

Battery power has been around for a long time. The risks inherent in the production, storage, use and disposal of batteries are not new. However, the way we use batteries is rapidly evolving, which brings these risks into sharp focus.

How to choose a battery for your energy storage system?

Proper battery design, manufacturing and installation are necessary to ensure safety. The batteries themselves should include built-in safety features such as vents and separators. Energy storage systems should also have safety features to protect against short-circuiting, overcurrent, arc flashing, and ground faults.

Why do we need batteries?

Batteries store energy which means we can reduce waste of energy. This can help us to reduce the amount of non-renewable energy we use and therefore helps the environment. Many batteries are easy to remove and replace or recharge. Many batteries are small and portable, so they can provide electricity for mobile devices and vehicles.
