## **Battery built-in module replacement**

How do you replace a battery?

We basically have two battery types - external and built in. The former is relatively easy to replace and it's safe to say anyone can do it. You just slide the battery out of its case and insert the new components. Doesn't sound too complicated, does it? With built in battery it's a bit more complex.

#### How to replace a laptop battery?

First prepare a safe and convenient space for this operation. Switch off your laptop and place it on a clean, flat surface. Turn it upside down and remove the back case (in some models it's enough to remove the small rectangular fragment). To this end, remove a few screws. Then take out the old battery and replace it with a compatible new model.

#### What is a module with own memory?

Modules with own memory may include seats and security devices for example. I was brainstorming possibilities with no knowledge of the sequence you followed nor how long you waited after powering down the 12V side and then the HV side. This might have caused some of the fault codes to get stored. Have you cleared any?
