What is a battery manufacturing code?

The manufacturing code is a combination of letters and numbers that are used by manufacturers to track the production of batteries. The format of the code may vary between different manufacturers, but they all serve the same purpose. The first part of the code usually indicates the manufacturing date of the battery.

What is a battery date code?

While the format may vary among different manufacturers, a common pattern includes the year and week of production. For example, a code like "19W02" would indicate that the battery was manufactured in the second week of the year 2019. By referring to battery date codes, users can also determine the expiration date of a battery.

Can a replacement battery be installed without a BEM code?

If a high-quality replacement battery is installed, even without entering a BEM code, there is no safety risk, there is no risk of overcharging of the newly installed replacement battery, there is no increased battery wear, and the vehicle electronics or other components are not damaged.
