Does an electric vehicle manufacturer outsource battery production?

This paper examines an electric vehicle manufacturer's (EVM) battery outsourcing decision and product choice strategy in a two-stage supply chain consisting of a battery supplier and an EVM that have different power structures. We analyze two game scenarios: the EVM outsources battery production versus the EVM produces batteries in-house.

Does product choice strategy affect EVM's battery outsourcing decision?

In addition, the identification of product choice strategy has nothing to do with the EVM's market position as well as the battery outsourcing decision. Second, the EVM's battery outsourcing decision is related to not only the fixed in-house operation cost but also the power structure between the EVM and the BS.

What is a battery outsourcing decision?

In addition, the battery outsourcing decision is related to not only the fixed operation cost of in-house production but also to its market position. We will elaborate this below. Proposition 3. When producing two EVs, the battery outsourcing decision of the EVM is as follows: 8 . 5 .

Does the EVM's battery outsourcing strategy affect supply chain profits?

In summary, there are very limited studies that combine the EVM's battery outsourcing decision and product choice strategy under different power structures, as well as the effect of the range anxiety and the government subsidy on the pricing strategies and profits of supply chain members.

Why do EVMs outsource battery production?

Second, the EVM's battery outsourcing decision is related to not only the fixed in-house operation cost but also the power structure between the EVM and the BS. When the operation cost is very low, the EVM will always benefit from producing batteries in-house.

What does K O mean in battery outsourcing?

Particularly, under the battery outsourcing scenario (k O), we consider three power structures: (a) k = O -SM denotes the case that the BS is the leader and the EVM is the follower; analytical completeness, we also consider k = O -V N, which denotes the Nash game between the BS and the EVM.
