

Battery panel fire indicator light flashes

Why does my fire alarm flash red every 5 seconds?

A Fire alarm flashes red every 5 seconds or 8 seconds refers to low battery power. Some fire alarm makes a chirping sound rather than beeping when it's running on low battery. Most fire alarms are powered by a 9V battery. These batteries only last around 6 months. Check the battery expiration date and replace it if needed.

What does a red light on a fire alarm mean?

Flashing both red and green lights means there's a problem with the fire alarm battery. Either it's running on low battery or it needs to be replaced. Read the user manual to be more sure about your fire alarm. A solid red light indicates that the batteries are low on power. Similarly, a blinking green light could mean the same thing.

Why does my fire alarm keep flashing?

It can be that the battery is low or there is any internal malfunction. The reasons can also be related to dust accumulating over the sensor or the smoke detector not getting enough power to start. Check how long the fire alarm flashes because that is significant in how you are going to solve this problem.

Why is my fire alarm blinking red?

However, make sure to replace the battery every 6 months. When your fire alarm blinks red at 10-second intervals, it primarily indicates an internal malfunction. But depending on the fire alarm model the reason could be different. In some fire alarm models, this indicates the alarm is temporarily in a desensitized state.

How do I know if my fire alarm is bad?

Some fire alarm panels may indicate the type of fire alarm trouble and its location. Here are some of the common reasons for a trouble signal. Check fire alarm battery connections and remaining capacity. They may fall below the rated capacity if they haven't been changed in 3-5 years. Does the fire alarm system have power?
