

Battery price tag recommendation

How much will battery electric cars cost in 2026?

Our researchers forecast that average battery prices could fall towards \$80/kWh by 2026, amounting to a drop of almost 50% from 2023, a level at which battery electric vehicles would achieve ownership cost parity with gasoline-fueled cars in the US on an unsubsidized basis. Source: Company data, Wood Mackenzie, SNE Research, Goldman Sachs Research

How much does an EV battery cost?

That's a huge drop in battery cost. The report says that a kilowatt-hour of usable EV battery capacity costs about \$139 in 2023, and using 2023 constant dollars, it was \$1,415/kWh in 2008. The estimate was calculated for production at a scale of at least 100,000 battery packs per year.

How much does an 80 kWh battery cost?

A more popular 80-kWh pack would be \$11,120. Considering a \$35,000-\$40,000 price tag for a car, it's still a substantial part of the price, but let's also recall that over 10 years ago, in a similar bracket, we would get only an EV with a 24-30-kWh battery and a few times shorter driving range.

How much will a battery cost in 2022?

Global average battery prices declined from \$153 per kilowatt-hour (kWh) in 2022 to \$149 in 2023, and they're projected by Goldman Sachs Research to fall to \$111 by the close of this year.

Will a drop in green metal prices push electric vehicle battery prices lower?

Technology advances that have allowed electric vehicle battery makers to increase energy density, combined with a drop in green metal prices, will push battery prices lower than previously expected, according to Goldman Sachs Research.

How much will a battery pack cost in 2023?

The prices are projected to reach \$133/kWh (in real 2023 dollars) next year, reflecting further declines resulting from technological innovation and manufacturing improvements. Looking ahead, BNEF expects battery pack prices to decrease significantly to \$113/kWh in 2025 and \$80/kWh in 2030.

BNEF expects average battery pack prices to drop again next year, reaching \$133/kWh (in real 2023 dollars). Localization challenges. Localizing battery manufacturing in regions such as the ...
