

Can an external power supply replace batteries

Can a battery be replaced with a power supply?

Say half an hour, then 24 V 24+A supply. Replacing a battery from a battery-operated equipment with a power supply can be tricky. Especially when the equipment uses an electric motor. The problem is that an electric motor can draw very large startup current - it can be as 10-20 times the nominal for a couple of seconds.

What is the difference between a battery and a power supply?

A battery is able to supply that current, while a typical power supply with overcurrent protection may latch or enter hiccup mode, from which it can't escape. First of all you need to determine the nominal motor current and the maximum current. The maximum current flows when the motor is mechanically overloaded.

How do I make a battery substitute power connector?

If you are making a battery substitute power connector for one of these devices then you might have to make separate 1.5 volt battery substitute connectors and supplies for each battery the device will use. A portable external power supply can be made using a bank of external cells wired in parallel to keep your device going all day.

Does a power bank work as a laptop battery alternative?

The real issue is power. So if there is no battery in my laptop and I plug-in that power bank, would it work as a laptop battery alternative. And what about the back up. If a 20000 mAh power bank is tested to supply 16000 mAh power then the back up should be 12 hours because that is four times the 4400 mAh 6 cell battery provides, right?

Are there external battery banks for laptops?

There are external battery banks which can output voltages acceptable to many laptops. They are chunky, hard to find and often from vendors who grossly overstate their capacity.

Can a laptop take in power over a USB port?

This is not the best answer, while UPS will do there are now low voltage (USB) batteries that can supply power to a laptop. Depending on particular battery technology they may be much better suited to frequent deep discharge than the UPS batteries. @Diego, laptops can not take in power over their USB ports.. they supply power to them.
