Energy storage for the electrical grid is about to hit the big time. By the reckoning of the International Energy Agency (IEA), a forecaster, grid-scale storage is now ...

Still, even with all these measures, an optimal clean energy system is likely to be "overbuilt"--meaning there will be hours and days when we simply can't use as much solar ...

As renewable energy capacity grows, we must identify and expand better ways of storing this energy, to avoid waste and deal with demand spikes. Utility companies and ...

Taking all the above details into consideration, a repowering project can pay off as quickly as a couple of months or take up to several years. It really depends on the value of ...

That presents an opportunity: finding new ways to use this energy, so it doesn't go to waste. The most common solution for too much wind or solar energy is to store it in big ...

In a recent webinar on the topic, subject matter experts from Borrego and IHI Terrasun discussed the ins and outs and pros and cons of various storage augmentation ...
