

Device can be used for solar charging

What is a solar charger?

A solar charger is a charger that employs solar energy to supply electricity to devices or batteries. They are generally portable. Solar chargers can charge lead acid or Ni-Cd battery banks up to 48 V and hundreds of ampere hours (up to 4000 Ah) capacity. Such type of solar charger setups generally use an intelligent charge controller.

What is a portable solar charger used for?

Portable solar chargers are best used to power small electrical items, such as smartphones and portable battery packs. They can be perfect for topping up the batteries of devices you might take on a camping trip, but generally aren't much help when it comes to feeding more power-hungry products, such as televisions, portable fridges and kettles.

Do you need a solar phone charger?

You might find yourself relieved to have a solar phone charger on hand, which not only tends to be lightweight and easy to carry around, but these gadgets effectively leverage the sun's power to power up your devices.

Should I buy a solar charger?

Even the highest-capacity power banks eventually run out of charge, and then you're stuck until you next reach mains power. Unless, you buy a solar charger. Harnessing power from the sun's rays, solar chargers are a useful backup to plugging into a power point.

Can a portable charger get energy from the Sun?

Most portable chargers can obtain energy from the sun only. Examples of solar chargers in popular use include: Small portable models designed to charge a range of different mobile phones, cell phones, iPods or other portable audio equipment.
