### Dismantle new energy battery module

Can a battery be used as a storage module?

After use in the vehicle, batteries can continue to be used sensibly, e.g. as a storage module. Together with our partner REMONDIS, we test and analyse battery systems and commission partner companies for the recycling or reuse process.

#### What is a lithium-ion battery module?

An energy-storage system comprised of lithium-ion battery modules is considered to be a core component of new energy vehicles, as it provides the main power source for the transmission system. However, manufacturing defects in battery modules lead to variations in performance among the cells used in series or parallel configuration.

#### Are EV batteries a waste management problem?

"On the one side,[disposing of EV batteries]is a waste management problem. And on the other side,it's an opportunity for producing a sustainable secondary stream of critical materials," says Gavin Harper,a University of Birmingham researcher who studies EV policy issues.

#### How can Remondis help with battery recycling?

Together with our partner REMONDIS, we test and analyse battery systems and commission partner companies for the recycling or reuse process. In addition to the environmentally-friendly handling of the batteries in the warehouse or during assembly, we aim to save resources with this project by identifying solutions for older or defective batteries.

#### Should EV batteries be recycled?

Better recycling methods would not only prevent pollution, researchers note, but also help governments boost their economic and national security by increasing supplies of key battery metals that are controlled by one or a few nations. "On the one side, [disposing of EV batteries] is a waste management problem.

#### How do EV batteries work?

EV BATTERIES are constructed a bit like nested dolls. Typically, a main pack holds several modules, each of which is constructed from numerous smaller cells (see graphic, p. 782). Inside each cell, lithium atoms move through an electrolyte between a graphite anode and a cathode sheet composed of a metal oxide.
