Why should EU countries consider the 'consumer-producer' role of energy storage?

It addresses the most important issues contributing to the broader deployment of energy storage. EU countries should consider the double 'consumer-producer' role of storage by applying the EU electricity regulatory framework and by removing barriers, including avoiding double taxation and facilitating smooth permitting procedures.

Why is energy storage important in the EU?

It can also facilitate the electrification of different economic sectors, notably buildings and transport. The main energy storage method in the EU is by far 'pumped hydro' storage, but battery storage projects are rising. A variety of new technologies to store energy are also rapidly developing and becoming increasingly market-competitive.

What is energy storage global conference 2024?

The Energy Storage Global Conference 2024 (ESGC), organised in Brussels by EASE - The European Association for Storage of Energy, as a hybrid event, on 15 - 17 October, gathered over 400 energy storage stakeholders and covered energy storage policies, markets, and technologies.

Can energy storage help the EU decarbonise its energy supply?

A number of EU countries have also teamed up for 'Important Projects of Common European Interest' on batteries research and innovation. Energy storage can help increase the EU's security of supply and support decarbonisation.

Why should you attend the energy storage global conference?

Featuring in EASE's publications and events, such as the Energy Storage Global Conference, gives you visibility and the opportunity to strengthen your network among storage experts.

What is energy storage coalition?

Energy Storage Coalition Together to accelerate the decarbonisation of the European energy system by increasing the deployment of sustainable and clean energy storage solutions to support renewables. Partners
