

What is an electrical energy storage system (battery storage) course?

The aim of this course is to provide the knowledge and understanding of the design, installation and commissioning of Electrical Energy Storage Systems (Battery Storage). The qualification has been designed in conjunction with the latest IET Code of Practice and is recognised by the Microgeneration Certification Scheme (MCS).

When was the first electricity storage system invented?

The first electrical energy storage systems appeared in the second half of the 19th Century with the realization of the first pumped-storage hydroelectric plants in Europe and the United States. Storing water was the first way to store potential energy that can then be converted into electricity.

What are electrical energy storage systems (EESS)?

Electrical energy storage systems (EESS) for electrical installations are becoming more prevalent. EESS provide storage of electrical energy so that it can be used later. The approach is not new: EESS in the form of battery-backed uninterruptible power supplies (UPS) have been used for many years. EESS are starting to be used for other purposes.

How does the integrated storage system work?

The integrated storage system is designed to cover 100 % of the demand with the energy generated by the PV system during the summer. During the rest of the year a little additional energy has to be purchased from the grid.

How does a PV storage system work?

Regardless of the time of energy production, the storage provides the energy generated by the PV generator to electrical appliances. Supply and demand can be adjusted to each other. The integrated storage system is designed to cover 100 % of the demand with the energy generated by the PV system during the summer.

What is mechanical energy storage?

Mechanical method The mechanical ES method is used to store energy across long distances. Compressed air energy storage (CAES) and pumped hydro energy storage (PHES) are the most modern techniques. To store power, mechanical ES bridges movement or gravity.
