Are lead-acid batteries recyclable in the UK?

The UK collects lead-acid, nickel-cadmium, and 'other' batteries for recycling. The government has revised its joint guidance on portable batteries in a bid to address the issues surrounding incorrect classification, particularly in relation to lead-acid batteries.

How many small lead acid batteries are produced a year?

The WasteCare Group, operators of the BatteryBack battery compliance scheme, estimates that at least 15,000 tonnes of small lead acid batteries weighing less than 4kg are placed on the market each year. The company says that only 1,500 tonnes are declared by producers.

What is a lead battery used for?

These are found on boats or campers, where they're used to power accessories like trolling motors, winches or lights. They deliver a lower, steady level of power for a much longer time than a starting battery. Lead batteries are used for a vast number of purposes, but all batteries provide either starting or deep cycle power.
