

How is the quality of blade batteries

Why should you choose a blade battery?

The space utilisation of the Blade Battery has been increased by over 50% compared with the traditional battery packs, which provides enhanced energy density and delivers longer range. Blade Battery has a long battery life with over 5000 charge and discharge cycles.

Why is a blade battery better than a battery core?

Because the blade battery has a larger heat dissipation surface and a thin thickness, the blade battery core has better heat dissipation performance. From the data released by BYD's blade battery patent, we can see the temperature simulation results of battery cells with different thicknesses inside the blade battery.

What is blade battery?

Blade Battery can change the size of the battery pack in the X and Y directions according to the vehicle space, and develop batteries of different specifications. This platform-based battery effectively reduces development costs and time.

How does a blade battery work?

The high-voltage wiring harness and sensors of the blade battery are in the Y direction of the battery cell. Therefore, the upper box can be in direct contact with the battery core. This allows the blade battery to save 10~20mm in height compared to batteries of the same specification.

What is the difference between a lithium ion and a blade battery?

The Blade Battery has a higher energy density than traditional lithium-ion batteries. It can provide a driving range of up to 600 kilometers on a single charge. The Blade Battery also meters. The Blade Battery is more thermally stable than traditional lithium-ion batteries and has a lower risk of catching fire.

What are the safety features of a blade battery?
