

# How long does it take for solar power generation to pay back

How long does it take for solar panels to pay back?

The time it takes for solar panels to be profitable (if at all) also varies by geography, as some towns simply get more sun than others. Chicester is known to be one of the sunniest locations in the UK. Here, the data shows that solar panels can pay back in just 12 years under ideal conditions (south facing, less than 20% shade, home all day).

What is a solar panel payback period?

A solar panel payback period is the length of time it takes for the savings on electricity bills to equal the initial investment made in a solar energy system. Before we delve into the payback periods of solar panels, let's discuss how much you could expect to pay for a solar panel system in the UK.

How long do solar panels last on EnergySage?

That's the average payback period on EnergySage. At the end of those 7.5 years, your solar panels will have saved you enough money on your electric bill to cover the upfront cost of your system. Year eight in the example is when you technically start saving money, having finally broken even on your investment.

How do I calculate my solar payback period?

To calculate your solar payback period, divide your combined costs by your annual savings. Combined costs (\$18,948) / annual savings (\$2,525) = solar payback period (7.5 years) In this example, your payback time would be 7.5 years, which is the average solar payback period for most EnergySage shoppers.

How long do solar panels last in the UK?

Domestic solar panel systems in the UK typically have payback periods ranging from 5 to 7 years, though, as we've already covered, this can be shorter or longer depending on multiple factors. Commercial solar installations can see payback periods as short as 1 to 3 years, sometimes even less for larger systems.

What is the shortest payback time for solar power?

The shortest payback time is for households in which someone is home all day to make use of the solar power as it is generated. By the end of 25 years, this homeowner could be ahead by around £11,000 (compared to just buying electricity from the grid). But the economics are not as good for households that are home less during the day.

Will solar panels pay for all my electricity? Solar systems can be - and often are - designed to produce 100% of household electricity consumption and essentially replace your ...

The payback period is the length of time it will take to make back your investment in purchasing a solar energy system. Solar panel costs have dropped a lot year after year over the past ...
