

How to find land for solar photovoltaic panels

How do I choose a solar panel farm?

First, take a look at your land. If it's a flat, open space that's 20 to 25 acres, your land is a good candidate for an average-sized solar panel farm. You should also know that once a solar developer installs the solar panels, they'll have very little impact on the physical state of your land.

How much land do you need for a solar panel farm?

The first thing you'll need when setting up a solar energy project is somewhere for it to go. And when you're looking for land, know that solar panel farms need quite a lot of it (compared to other forms of power generation) - for a 1MW farm, you'll likely need 5 - 8 acres. Keep in mind that you won't just need space for the panels themselves.

Can I rent land for a solar farm?

Renting land for a solar farm is a commercial lease and is not an agricultural use, so Agricultural Property Relief from inheritance tax may be lost. Transferring ownership of the land to another individual or trading entity before any development starts may be worth considering, to minimise the tax implications, but seek professional advice.

Can solar farms be built on flat land?

As with most wind power projects, developers only place solar farms on land that meets certain conditions. The land should be sturdy for solar projects and not fall foul to sinking from soft soil. But it's also essential to consider the landscape for a site, as solar projects are particularly reliant on flat land without steep slopes.

How do you decide if a solar farm is viable?

Alongside the size and quality of the land, its location will play a key role in determining the viability of a solar farm. YSG's rule of thumb is to make sure that the parcel is within 1,000 feet of three-phase power, and 2 miles of a substation.

How do I lease solar panels?

You can also lease the land to a company, university, or municipality that purchases the solar panels outright. Or you can lease your land to a solar developer like Verogy, who owns the solar panels and sells the energy to a company, university, or municipality through a power purchase agreement (PPA).

With the UK government legally committed to meeting 15% of the country's energy demand from renewable sources by 2020 there is currently an opportunity for landowners to look into creating solar farms. As with any change of use ...
