

How to identify the battery type

How do I choose a battery?

Choose any one or a combination of steps to determine your battery type and care instructions. Liquid lead acid batteries, or wet cells, are the most common lead acid battery type. AGM batteries, or dry cell batteries, are the newest type of battery, and can be substituted for wet cell batteries.

How do I find a battery that fits my car?

There are online tools that can identify the battery you need according to your car's make and model, and even better, by your car's registration plate. Click here to use the battery finder tool. It will list all the battery sizes that fit your car. So, great. Now you have a list of batteries that will definitely fit your car.

What are the different types of battery types?

Liquid lead acid batteries, or wet cells, are the most common lead acid battery type. AGM batteries, or dry cell batteries, are the newest type of battery, and can be substituted for wet cell batteries. AGM batteries are safer and more durable when being moved from place to place, but can easily be ruined during the charging process.

How do I know if my car battery is bad?

Alternatively, you can look at the battery in your car itself. It should be clearly labelled, allowing you to check its specification and order the correct replacement. Many batteries will have a two- or three-digit designation, known as a group size, that is a standard provided by the Battery Council International.

Do you know the dimensions of your battery?

If you happen to know the dimensions of your battery, below we list the UK code for those dimensions. For example, if your battery has dimensions: Length 212mm x Width 175mm x Height 175mm, then your battery size is 063. If you don't know the dimensions, don't worry! We'll go on to discuss how to identify your battery size even if you don't know.
