

# How to maintain battery peak

How to maintain a car battery for a long time?

Another simple tip that can help you maintain your battery for longer is to check the battery's water levels. If the battery plates are fully covered, it means that your water level is where it should be. However, when the battery plates are exposed, it means that the battery fluid level is low.

What should I do if my battery is slow?

When your battery is slow, turn on your phone's low-power or battery-saving mode. Both Androids and iPhones have special battery-conservation modes that turn off background apps, decrease processing power, dim the screen, and disable other services that can drain your battery quickly.

How often should a car battery be charged?

When the battery is removed you should fully charge it every three months. This will ensure optimum performance when you do come to use it again. Feel free to check out our guide on how long car batteries normally last. To keep your battery charged you'll need a battery charger.

How do you keep a car battery charged?

Keeping a battery at full charge or always draining it to 0 can damage it and reduce its capacity. Try to keep your battery midway charged when you can and only charge to 100% when you need the extra time. Avoid extreme temperatures.

How often should you clean a car battery?

Therefore, it's important to clean your car battery every few months to avoid long-term damage. You can either create your own cleaning solution by using baking soda and water or use our Electrical Contact Cleaner with a wire brush to remove any crust and corrosion left on the battery.

How often should you check your car battery?

This will affect the acid level of your battery, so make sure to check your battery's acid levels every six months and ensure all the cells are filled equally, otherwise a lot of damage may be caused to the battery. Another simple tip that can help you maintain your battery for longer is to check the battery's water levels.
