

How to obtain energy storage subsidies

How much government funding has been given to energy storage projects?

This was published under the 2022 to 2024 Sunak Conservative government. Over £32 million government funding has been awarded to UK projects developing cutting-edge innovative energy storage technologies that can help increase the resilience of the UK's electricity grid while also maximising value for money.

How much funding will UK energy storage projects receive in 2022?

This announcement follows the £32.8 million funding awarded to 5 UK energy storage projects across the country in November 2022 to create first-of-a-kind prototypes of their technology. A total of £69 million of funding has been awarded so far through this programme, helping to drive innovative technologies such as energy storage.

What is the UK's energy storage Investment Support Scheme?

Credit: David Pimborough /Shutterstock. The government of the UK has launched a new investment support scheme aimed at bolstering the country's energy storage infrastructure. The initiative aims to encourage the development of long-duration energy storage (LDES) facilities, which have not seen significant investment in nearly four decades.

Can energy storage improve the resilience of the UK's electricity grid?

Over £32 million government funding has been awarded to UK projects developing cutting-edge innovative energy storage technologies that can help increase the resilience of the UK's electricity grid while also maximising value for money. Courtesy of NREL.

What is the long duration energy storage Investment Support Scheme?

Long Duration Electricity Storage investment support scheme will boost investor confidence and unlock billions in funding for vital projects. The UK is a step closer to energy independence as the government launches a new scheme to help build energy storage infrastructure.

Can new energy storage technologies boost UK energy resilience?

However, new energy storage technologies can store excess energy to be used at a later point, so the energy can be used rather than wasted - meaning we can rely even more on renewable generation rather than fossil fuels, helping boost the UK's long-term energy resilience.

The government has also indicated that the BESS will need to obtain at least 75% of its energy from the co-located generation. That compares to the effective 100% requirement that solar-plus-storage projects used to ...
