How to replace electrolytic capacitor?

Tip1: If a capacitor has long enough leads exposed on the front side of the board, you can cut the capacitor off leaving the old leads and solder the new capacitor to the old leads. This method is even faster. See the last picture for an example. Tip 2: You should replace all the electrolytic capacitors, not just the visibly bad ones.

How do you replace a capacitor?

Hot melt glue the new capacitor to the top of the board, the jumpers should remain twisted. Tip1: If a capacitor has long enough leads exposed on the front side of the board, you can cut the capacitor off leaving the old leads and solder the new capacitor to the old leads. This method is even faster. See the last picture for an example.

How do you remove a faulty capacitor from a circuit board?

Desolder Capacitor Leads: Apply the soldering iron to each lead of the faulty capacitor, melting the solder joints to facilitate removal. Use a desoldering pump or solder wick to remove excess solder and free the capacitor leads from the circuit board.

How do you put a capacitor on a circuit board?

For larger capacitors use thicker wire (lower gauge) or put multiple cat 5 strands in parallel to each lead. Find and mark all the capacitor leads on the back side of the circuit with + and -. Make jumpers that will go from the back side of the board to the front of the board where the new capacitor will be placed.
