Does a Tesla turn off when you leave a car?

Like a modern PC, a Tesla automatically powers off (sleeps) to save energy when you leave the car with your keycard, phone key, and/or key fob, but wakes right back up when it senses your return. A Tesla will also turn off (sleep) if you park the car and stay in it for more than 15 minutes.

How do I deactivate the EV battery conditioning mode?

The Utility mode can be deactivated by pressing the EV button to the OFF position. The function cannot be deactivated from the EV settings. The Battery conditioning mode is efficient during the winter time when the high voltage battery temperature is low. This mode is recommended to improve driving and DC charging performances during winter.

Can You power down a Tesla without leaving the car?

Sometimes you may need to power down your Tesla without leaving the car or waiting for 15 minutes. In this case, you can manually power off (sleep mode) your Tesla. There are at least three other scenarios where manually powering down your Tesla makes sense:

Does power off stop a Tesla from turning back on?

Power Off will NOT stop the Tesla from turning back on when prompted if you have a key card, key fob, or phone key active and within range. If you do need to turn off your Tesla completely (so that it will not restart when you touch the brake or open the door), you will have to disconnect the 12 volt (low voltage) battery.
