

Is it dangerous to use lithium battery power at home

Are lithium-ion batteries dangerous?

Lithium-ion batteries used to power equipment such as e-bikes and electric vehicles are increasingly linked to serious fires in workplaces and residential buildings, so it's essential those in charge of such environments assess and control the risks. Lithium-ion batteries are now firmly part of daily life, both at home and in the workplace.

Are lithium-ion batteries a fire risk?

Over the past four years, insurance companies have changed the status of Lithium-ion batteries and the devices which contain them, from being an emerging fire risk to a recognised risk, therefore those responsible for fire safety in workplaces and public spaces need a much better understanding of this risk, and how best to mitigate it.

Can lithium ion batteries explode?

And even when a lithium-ion battery fire appears to have been extinguished, it can reignite hours - or sometimes even days - later. Lithium-ion batteries can also release highly toxic gases when they fail, and excessive heat can also cause them to explode.

Should lithium-ion batteries be used at home and in the workplace?

UNSW expert Dr Matthew Priestley explains why greater respect and education is needed regarding the use of lithium-ion batteries at home and in the workplace. Lithium-ion batteries are widely used since they can store a large amount of energy in a relatively small area.

What happens if a lithium-ion battery fails?

In addition to this, the way a lithium-ion battery produces power also generates heat as a by-product. In an uncontrolled failure of the battery, all that energy and heat increases the hazard risks in terms of fuelling a potential fire.

Why are lithium-ion battery fires difficult to quell?

Due to the self-sustaining process of thermal runaway, Lithium-ion battery fires are also difficult to quell. Bigger batteries such as those used in electric vehicles may reignite hours or even days after the event, even after being cooled. Source: Firechief's Global
