

# Lead-based perovskite solar cells

What are lead-based perovskite solar cells?

Lead-based perovskite solar cells (PSCs) have attracted considerable interest since 2009 owing to their excellent optical and electrical properties, achieving a certified efficiency of 25.5% over a 12 year period.

Can lead hybrid perovskites be used for solar cell application?

The effective solutions for lead hybrid perovskites for solar cell application is further outlooked. Perovskite photovoltaic has been attracting intense attention as an emerging technology due to its figure of merits including high power conversion efficiency, low-cost fabrication, and others.

Are lead halide perovskite solar cells sustainable?

Sustainability of lead halide perovskite solar cells Though the lead toxicity exists in most of highly-efficient perovskite cells so far, the use of lead halide perovskite can hardly affect the environment and health fortunately with the development of ECR (encapsulate, capture, and recycle) technology.

Why do solar cells use organic-inorganic lead halide perovskites as absorbers?

1. Introduction Solar cells using organic-inorganic lead halide perovskites as absorbers have attracted world-wide attention due to the impressive power conversion efficiency (PCE) and low-temperature solution-processable fabrication.

Are perovskite solar cells safe?

Despite notable advantages and power conversion efficiency achieved by perovskite solar cells (PSCs), they could not hit the market commercially as perovskite solar cells are bottlenecked by the toxicity issue caused by the metal lead. Lead has proven toxicity issues that can harm human beings and the ecological system to a significant extent.

Can a perovskite solar cell prevent lead leakage?

On-device lead sequestration for perovskite solar cells. *Nature* 578, 555-558 (2020). In this study, lead-absorbing materials with suitable transparency and lead-chelating activity at various temperatures were applied at both the front and back sides of the device stack to prevent lead leakage in a wide range of temperature conditions.

Lead-based perovskite materials have drawn the attention of researchers around the globe. These cells have the potential to improve the efficiency of solar energy conversion, ...

A phenothiazine-based molecular hole-transporter (PTZ-CPA) carrying a ...

Among numerous alternatives to lead-based perovskite, including tin-, germanium-, bismuth-based perovskites, and double perovskites, tin-based perovskites such ...

# Lead-based perovskite solar cells

Lead-based perovskite materials have drawn the attention of researchers around the globe. These cells have the potential to improve the efficiency of solar energy conversion, and they are being developed as a ...

First, we introduced two cations in the precursor mixture, which improved power conversion efficiencies (PCE = 1.5%) of antimony (Sb)-based MA 1.5 Cs 1.5 Sb 2 I 3 Cl 6 ...

First, we introduced two cations in the precursor mixture, which improved power conversion efficiencies (PCE = 1.5%) of antimony (Sb)-based MA 1.5 Cs 1.5 Sb 2 I 3 Cl 6 solar cells by 81% compared to conventional Cs ...

Yang, W. S. et al. Iodide management in formamidinium-lead-halide-based perovskite layers for efficient solar cells. *Science* 356, 1376-1379 (2017). Article CAS ADS ...

The resultant perovskite solar cells deliver a power conversion efficiency of 25.7% (certified 25.04%) and retain >90% of their initial value after almost 1000 hours aging at ...

Despite notable advantages and power conversion efficiency achieved by ...

Solar cells using organic-inorganic lead halide perovskites as absorbers have ...

Perovskite photovoltaic solar cells have gained popularity throughout the past few years. They have become the subject of multiple research studies due to their ability to ...

Herein, the recent progress of emerging lead-free tin (Sn)-based PSCs is reviewed. First, the structural and photovoltaic-related properties of Sn-based perovskites are summarized. Following a brief introduction of film deposition ...

Here we analyse chemical approaches to immobilize Pb<sup>2+</sup> from perovskite solar cells, such as grain isolation, lead complexation, structure integration and adsorption of leaked ...

Lead-based perovskite solar cells (PSCs) have attracted considerable interest since 2009 owing to their excellent optical and electrical properties, achieving a certified ...

Perovskite solar cells (PSCs) as an emerging renewable energy technology are expected to play an important role in the transition to a sustainable future. However, lead ...

Lead-based perovskite solar cells (PSCs) have attracted considerable interest ...

The authors review recent advances in inverted perovskite solar cells, with a focus on non-radiative recombination processes and how to reduce them for highly efficient ...
