

Combining a simple (yet powerful) light-trapping structure with a luminescent down-shifting material (t-U (500)/Eu³⁺) allows remarkable efficiency enhancement (28%) in ...

Effective spectral utilization can be achieved by using a variety of methods, such as multiple junctions, intermediate band gaps, quantum dot spectral converters, luminescent ...

Here we consider a non-concentrating system with limited emission angle in a thin, light trapping GaAs solar cell with high radiative efficiency, as shown in Figure 1b.

A new light-management design could allow single-junction GaAs solar cells to reach power-conversion efficiencies as high as 38%. This is the finding of Emily Kosten and co ...

Abstract: This project proposes the design of automatic cleaning function and automatic light source tracking system for solar street lamps. The external environment is detected by ...

Organic solar cells (OSCs) are a promising renewable energy technology with the advantages of low cost, light weight and flexibility, and have attracted a considerable ...

1 Introduction. Since the development of nonfullerene acceptors, organic solar cells (OSCs) have made strides toward reaching to 20% power conversion efficiency (PCE) in just a few years. [] ...

Agrioltaics combines photosynthetic growth with electricity generation using semi-transparent photovoltaics. Zorz et al. investigate this concept using photosynthetic algae ...

This is the first report of an investigation on flexible perovskite solar cells for artificial light harvesting by using a white light-emitting diode (LED) lamp as a light source at ...

As a promising strategy for enhancing light utilization, constructing cell with tandem structure exhibits great potential in achieving high efficiency, which encourages the ...

3 Tandem solar cells, where multiple single-junction cells are combined optically in series, provide a path to making cells with high areal efficiencies, with multiple material ...

The automatic sun-chasing panel can effectively improve the utilization of solar energy by adjusting the robotic arm that keep a right angle towards the sunlight.

1 Introduction. Photovoltaics, which converts solar energy into valuable electricity, is considered an efficient, clean, and cost-effective new energy technology. [] Among which, ...

By further integrating an anti-reflective structure, the optimal structure boosts the average visible transmittance and power conversion efficiency of ST-OSCs to 44.3% and ...

3 ???· Tandem solar cells, where multiple single-junction cells are combined optically in ...

Abstract: The widely accepted limiting efficiency for crystalline silicon solar cells with Lambertian light trapping under 1 sun was previously calculated to be 29.43% for a 110 ...

Optically Enhanced Semitransparent Organic Solar Cells with Light Utilization Efficiency Surpassing 5.5%. Ye-Fan Zhang, Ye-Fan Zhang. Jiangsu Key Laboratory for ...
