

Nanocarbon materials can be effectively blended with polymers and have been widely reported to enhance the performance of polymer solar cells owing to their desirable ...

An in-depth analysis of a solar cell with a photoanode made of glass/FTO/TiO₂, and Ag- CdSe quantum dots (QD) nanocomposite, an electrolyte of iodide and triiodide, and a ...

Among the widely popular solar cell technology, the third-generation ...

This study explores the enhancement of silicon-based solar cell performance and durability through the application of zinc oxide (ZnO) nanocomposite film coatings. ...

This article discusses the design and preparation of a modified MXene-based nanocomposite for increasing the power conversion efficiency and long-term stability of perovskite solar cells. The MXene family of materials ...

It turned out to describe the operation principle of nanocomposite solar cells. It includes the photochemical affinity of the excited nanomolecular system as the thermodynamic ...

This article discusses the design and preparation of a modified MXene-based nanocomposite for increasing the power conversion efficiency and long-term stability of ...

Nanocarbon materials can be effectively blended with polymers and have ...

Furthermore, the incorporation of carbon nanotubes (CNTs) into organic solar ...

The solar cell design being proposed combines perovskite and nanoparticles to enhance its performance. Figure 1 illustrates the structure of the proposed solar cell, which ...

The fabricated nanocomposite was characterized using analytical techniques including FTIR, TGA, XRD, Raman, XPS, and BET. The assembled DSSC obtains a ...

Furthermore, the incorporation of carbon nanotubes (CNTs) into organic solar cells (OSCs) has demonstrated notable enhancements in efficiency, surpassing 14.00%, ...

Dye-sensitized solar cells (DSSCs) are being investigated as a potential replacement for regular inorganic solar cells. Because of their simple and low-cost ...

It turned out to describe the operation principle of nanocomposite solar cells. ...

Organic solar cells have been intensively developed worldwide during the last two decades. After breaking the psychological barrier of 10% in power conversion efficiency ...

The ZnO-NiO (nanocomposite)/Si solar cell improve power conversion efficiency for eventual photovoltaic application. Thus, we investigated this nanocomposite at ...

In this context, nanocrystal-conjugated polymer hybrid solar cells - also called nanocomposite solar cells - are one of these new approaches, combining advantages of ...
