

Photovoltaic panels solar energy equipment

What are the components of solar equipment?

Among the solar equipment, we also find several of the key components, such as solar panels, inverters, and racking systems. Solar panels are the components that harness and store the energy produced by the sun. Photovoltaic solar panels (PV), are composed of silicon semiconductors, which capture energy from the sun's rays.

How do photovoltaic solar panels work?

Photovoltaic solar panels (PV), are composed of silicon semiconductors, which capture energy from the sun's rays. The process is named the photovoltaic effect. When exposed to the sun, PV solar panels produce energy in the form of a direct current charge, which can be measured in a unit of watts. You can learn more about how solar panels work here.

What is a solar PV system?

A Solar PV System, short for Photovoltaic System, is a renewable energy solution. It captures sunlight using photovoltaic cells and then converts it into electricity.
