What is a Redstone comparator?

Community content is available under CC BY-NC-SA unless otherwise noted. A redstone comparator is a block that can produce an output signal from its front by reading chests, lecterns, beehives and similar blocks, or repeat a signal without changing its strength.

What is the signal strength of a Redstone comparator?

If the signal strength is 9 at the rear, 2 at the right input and 5 at the left input, the output signal has a strength of  $\max(9 - \max(2, 5), 0) = \max(9 - 5, 0) = 4$ . A redstone comparator can measure the fullness of a chest, as well as other block states, even through an opaque block.

What happened to Redstone comparators?

Comparators set to subtract mode appear to be powered as well regardless of incoming power. The subtracting-only model still exists and can be achieved through / setblock. The powered front torch when in subtraction mode is now lower. Comparators set to subtract by hand now appear normally again. Redstone comparators now measure cakes.

How long does a Redstone comparator take?

It takes 1 redstone tick (2 game ticks, or 0.1 seconds barring lag) for signals to move through a redstone comparator, either from the rear or from the sides. This applies to changing signal strengths as well as simply to turning on and off. Redstone comparators check their power state before their scheduled ticks update.

What happens if lava flows into a Redstone comparator?

If lava flows into a redstone comparator's space, the redstone comparator is destroyed without dropping as an item. A redstone comparator can be placed on the top of any opaque block with a solid full-height top surface (including upside-down slabs and upside-down stairs). In Bedrock Edition, a comparator can also be placed on walls and fences.

How many Redstone torches does a comparator have?

The comparator has two miniature redstone torches at the back and one at the front. The back torches turn on when the comparator's output is greater than zero (the arrow on top also turns red). The front torch has two states that can be toggled by using the comparator:

Many people seem to have a use for a redstone device that fades in when ...

I still don't get how the Redstone Comparator works. I've watched countless of videos but I still don't get the use of it.

???? (Redstone Capacitor)????????,????????[TEN2]????? (Technical Engineering

# Redstone Capacitor

2),????MOD??,??Minecraft(????)MOD(??)????????? ...

105K subscribers in the redstone community. A place to talk about redstone, whether you want to show your creations or ask for help. ... Redstone capacitor using a comparator (Replacement for hFog's capacitor that was fixed in the ...

Los comparadores se pueden encadenar con alambre de redstone entre cada comparador, y permitir&#225; una se&#241;al de redstone de longitud ilimitada, sin demora alguna. Como un ...

Usage Redstone Flux battery. A flux capacitor can be charged with Redstone Flux using an energetic infuser, another flux capacitor or similar can be placed in machines ...

Der Redstone-Komparator (Vergleicher) ist ein Bauteil, das bei Redstone-Techniken verwendet wird. Er hat auf seiner Oberseite einen gro&#223;en, dreieckigen Pfeil, der von der Eingangsseite mit den zwei Redstone-Fackeln zur ...

Redstone repeaters are important components of any Minecraft redstone system. They perform several functions. They only allow current to pass one way. The repeater has an arrow on top; ...

Many people seem to have a use for a redstone device that fades in when the signal is turned on, and fades out when the signal is turned off. So many, in fac...

The LV, MV and HV Capacitors are energy storage blocks added by Immersive Engineering. A ...

Try using a lenghtener. It can increase the duration of a redstone pulse to last as long as you like. You can read about look at it here: #PULSESUSTAINER

Try using a lenghtener. It can increase the duration of a redstone pulse to last ...

This is a design for a redstone capacitor that you can either have an immediate decay of charge or you can make it save the signal strength. Sadly not both j...

A redstone comparator is a block that can produce an output signal from its front by reading chests, lecterns, beehives and similar blocks, or repeat a signal without changing its strength. ...

You can improve this by using an RS-NOR Latch (which is just a few Redstone Torches and ...

Leave a LIKE if you found this useful!Today we take a look at how to use the redstone comparator in Minecraft, running you through the very basics, through t...
