What is a battery cabinet (IBC) system?

Battery Cabinet (IBC) systems are housed in single free-standing cabinets. Model IBC-L with a single battery voltage range is available to meet application runtime needs. Up to four cabinets may be installed to further extend battery runtimes. The cabinets match the UPS cabinet in style

Where is the battery cabinet located?

A location for the battery cabinet is on the right side of the UPS cabinet. This location will allow for future expansion using an external module. Cabinets can be permanently bolted to the floor or left standing on leveling feet. Power and control wiring can be routed through the top or bottom of the cabinet depending on installation

What is the schematic symbol for a battery?

The schematic symbol for a battery is made up of short and long parallel lines. The longer line represents the positive terminal of the battery, while the shorter line represents the negative terminal: Ground is the common return path of a circuit, where current returns to its source. This is often referred to as the negative side in a circuit.

How many volts should a battery cabinet have?

600V. The wiring should be a minimum of 18 AWG rated at 48V, 1 A minimum. All interface wiring between the UPS and battery cabinet is to be provided by the customer. When installing external interface wiring (for example, battery breaker shunt trip) to the battery cabinet interface terminals,

How to connect UPS CABINET & Battery Cabinet?

Wiring between the UPS and battery cabinet is to be provided by the customer. When installing external interface wiring (for example, battery breaker shunt trip) to the battery cabinet interface terminals, conduit must be installed between the battery cabinets and the UPS cabinet

How do I install the 9395 model IBC-L Battery Cabinet?
