How do I install the computer smart 3 fast 12VDC unit?

Instruction Manual... The Computer SMART III FAST 12Vdc unit must be installed by authorised and qualified staff. The power supply plug must be disconnected and measuring systems switched off before handling, altering the connections or replacing the unit.

What parameters should be configured for computer smart 3 fast 12VDC unit?

The parameters to be configured are: The value : when the unit exceeds this value for 30 minutes, alarm is triggered, is enabled, the Computer SMART III FAST 12Vdc unit enters No Connection and if alarm status and activates alarm The...

How to connect x1-smart series inverter?

on the bracket. Screw the cross recessed screw on ring ConnectionX1-Smart series inverter have a couple of PV connectors which can be connected in series into 2-strings PV modules. Please select PV modules with excellent function and reliable quality. Open circuit voltage of module array connected

What is computer smart 3 fast 12VDC reactive energy regulator?

PRODUCT DESCRIPTION The Computer SMART III FAST 12Vdc reactive energy regulator is a unit that measures the grid cosine and regulates capacitor connection and disconnection in order to correct it. It also calculates and displays the main electrical parameters of balanced or unbalanced single-phase and three-phase networks.

What mode does a computer smart 3 fast 12VDC unit use?

In the Modbus protocol, the Computer SMART III FAST 12Vdc unit uses the RTU (Remote Terminal Unit) mode. In the RTU mode, the message start and end are detected with silences of at least 3.5 characters, and the 16-bit CRC error-detection method is used.

What is computer smart 3 fast 12VDC outputs variable?

Page 60 Computer SMART III FAST 12Vdc outputs variable Shows the status of the 12 (Computer SMART III 12 FAST 12Vdc model) or 6 (Computer SMART III 6 FAST 12Vdc model) isolated voltage outputs. It is a 16-bit variable in which each bit indicates the status of an output.
