How do solar panels work?

When sunlight hits layers of silicon inside solar cells, an electric charge builds up, creating a flow of electricity. Solar panels are mainly located on the roofs of homes and buildings and can generate electricity and heat water free of charge. In the Northern Hemisphere (including Scotland) solar panels work best when they face south.

How do solar farms work?

Solar farms are large areas of land that can be covered with thousands of solar panels that generate lots of electricity. Some solar farms have fixed solar panels that always face the same direction. Some have moving panels that turn so that they always directly face the Sun. This helps them generate as much electricity as possible.
