

# Solar charging prices and China

Is there a reasonable charging price for electric vehicles in China?

The number of electric vehicles in China is expected to grow rapidly, triggering the nationwide large-scale construction of charging stations. At the same time, a reasonable charging price has not been established. This article records the views of station operators and EV users and calculates a charging pricing range.

How much do charging services cost in China?

Currently, charging services in China are priced by companies on a market-based basis. The highest-priced services, such as Tesla Supercharging, can be as high as 2.59 CNY/kWh; the lowest-priced services are settled with residential electricity at about 0.3 CNY/kWh.

What is China's electric vehicle charging infrastructure plan?

According to the Chinese government's 14th five-year plan, an advanced charging infrastructure system will be in place by the end of 2025 to meet the demand for more than 20 million electric vehicles. Discover all statistics and data on Electric vehicle charging infrastructure in China now on [statista.com](https://www.statista.com)!

Which country has the fastest EV charging infrastructure?

The People's Republic of China ("China") is not only leading the growth in global electric vehicle (EV) sales, but is also rolling out EV charging infrastructure faster than other countries. In China, smaller EV models are common (best seller: the Wuling Hong Guang Mini EV) and do not require much energy to charge fully.

Why is EV charging so popular in China?

The construction of charging facilities is widespread in China due to national support of the EV industry and the pricing of EV charging is affected by all the factors in the macroscopic electricity market. Besides, the pricing of charging is also related to the profitability of charging station operators.
