

# Solar panel assembly tips and tricks

How to assemble a solar panel?

So, except plates, you also need some tin, iron and a soldering pencil. Take a notice: it's better not to use tin overmuch. Make sure joints are soldered proper and good. After all needed details have been prepared, you can start to assemble your solar panel. After working soldering spots with a special pencil, use the iron to apply tin carefully.

How do I plan a DIY solar system?

Take a deep breath, it's time to plan your DIY solar system. What do you need electricity for? The first step to any DIY solar panel installation is calculating your electricity demand. For grid-tie home solar panels, take a look at your electricity bills. You can design your system to meet your average monthly kilowatt hour consumption.

How to install solar panels?

The basic system is to start with the installation of a rack or platform. If the panels are roof-mounted, a roof racking system is first installed. A ground platform is needed if the panels are ground-mounted, and installing the solar panels is not difficult. What is more difficult is wiring them.

How do you maintain a solar panel system?

With preventive maintenance, you can keep your system running at peak performance levels without any costly repairs down the line. The first step in preserving your solar panel system is cleaning them regularly. Dirt, dust and bird droppings can accumulate over time and reduce the efficiency of the photovoltaic cells inside the panel.

How do I choose a home solar panel system?

For grid-tie home solar panels, take a look at your electricity bills. You can design your system to meet your average monthly kilowatt hour consumption. If you are building an off-grid diy solar panel system for your cabin, boat, van, or RV solar panels, feel free to use our off grid solar load calculator.
