

The battery pack is no longer charging after a replacement

Why is my laptop not charging?

Try first to charge it while the laptop is turned off. Not sleep or hibernate, but off. If it charges then, the charger is the problem. It means it isn't putting out enough power to both run the device and charge the battery. So you would then need to replace the charger.

Should I replace my laptop battery or charger?

Ultimately, if you don't see any improvements after trying all the above, then it's maybe best that you replace either the charger or battery itself. This will require contacting your laptop manufacturer and placing an order. Batteries and the chargers are not necessarily cheap, especially if it's an older system.

Why does my laptop battery take so long to charge?

If you keep external devices such as a smartphone, a USB external drive, mouse, printer and anything else attached to your system while charging, it will take longer for your battery to reach 100%. Make sure you disconnect all of those devices so your system won't be competing with all the other electronics.

How do I fix a battery not charging Windows 10?

Sometimes unknown glitches can prevent the battery from charging. An easy way to fix it is to power down your computer, hold down the power button for 15 to 30 seconds, plug in the AC adapter, then start the computer.

What happens if a battery pack goes bad?

Battery packs are made from many lithium-ion cells. So if one goes bad, it's more than likely going to negatively impact the surrounding cells. If left unchecked, a bad lithium-ion battery can overheat and go into thermal runaway, which is never a good thing.

How long does a battery pack last?

It's these charge and discharge cycles that wear the battery the most. A battery pack is only good for so many cycles. Typical cobalt-based lithium-ion battery packs will last anywhere between 500 to 1200 cycles depending on the configuration and application. This usually comes out to 3 to 5 years in most use cases.
