How do I connect a lead acid battery?

There are three ways to connect your lead acid batteries--parallel, series, and a combination known as series/parallel. We cover each of these battery configurations in greater detail in our Battery Basics tutorial section of the site should you want to delve in a little deeper or reinforce what you already know.

How to connect batteries in parallel?

Connecting batteries in Parallel is normally performed to increase capacity. This can be done by connecting the positive terminal of the first battery to the positive terminal of the second battery. Likewise, the negative terminal of the first battery is connected to the negative terminal of the second battery.

What happens if two batteries are connected in parallel?

Likewise, the negative terminal of the first battery is connected to the negative terminal of the second battery. When charging multiple batteries connected in parallel, batteries in the string will receive the same charge voltage but the charge current each battery receives will vary until equalization is reached.

Should a lead acid battery be positive or negative?

Safety Rule #2 -- When Installing a Battery Start with the Positive There is a serious amount of stored potential energy available in a sealed lead acid battery. A shorted car battery, for example, can deliver several hundred amps in the blink of an eye. To put that in perspective that is more than an arc-welding machine.

How to connect a battery in series?

Connecting batteries in series means to connect the positive terminal of the first battery to the negative terminal of the second battery and so on down the string. The interconnecting cables must have equal lengths and resistance to equalize the load.

Should I connect different batteries?

Point To Ponder: Never connect batteries of different size, type/chemistry, brand or age. It is also a good idea to make sure the batteries are of a similar state of charge. Connecting batteries that are different can lead to trouble. The goal of parallel battery configurations is to increase your systems overall capacity.
