

Tips for choosing outdoor energy storage power supply

How to care for a power supply?

To care for a power supply, it's important to keep it clean and dust free. The power supply itself does not require much maintenance, but the cables and casing are the components that users will handle. The average user has no need to mess with its parts.

Should you bring a power station on a long trip?

Another big advantage is that you can bring a much smaller power station on longer trips. If you have a daily power usage of 400Wh, a week-long trip would need a power station with a capacity of at least 3000 Wh.

How much power do you need for a week-long trip?

If you have a daily power usage of 400Wh, a week-long trip would need a power station with a capacity of at least 3000 Wh. But with a solar panel that can produce 300-500 Wh on a good day, a 1000 Wh power station should be sufficient as long as there is good weather!

How much power do you need for a camping trip?

For small, off-grid camping trips, you don't need much: A simple power pack or small solar panel can be more than enough! To calculate your maximum power output, start by making a list of all the devices you plan to use simultaneously during your camping trip.

Should you bring solar panels to a camping trip?

For camping trips that exceed two or three days, bringing solar panels is often a good idea. This way, you can recharge your power station and extend its capacity, or even cover your entire power needs indefinitely as long as there is good weather! Solar panels offer several benefits for campers.

How do I calculate my maximum power output during a camping trip?

To calculate your maximum power output, start by making a list of all the devices you plan to use simultaneously during your camping trip. For instance, you might want to charge your smartphone while powering a portable fan and a small LED light.
