

# Tips on using new energy batteries

Are new battery technologies a good idea?

The biggest concerns -- and major motivation for researchers and startups to focus on new battery technologies -- are related to safety, specifically fire risk, and the sustainability of the materials used in the production of lithium-ion batteries, namely cobalt, nickel and magnesium.

Is battery energy storage a new phenomenon?

Against the backdrop of swift and significant cost reductions, the use of battery energy storage in power systems is increasing. Not that energy storage is a new phenomenon: pumped hydro-storage has seen widespread deployment for decades. There is, however, no doubt we are entering a new phase full of potential and opportunities.

Can battery energy storage power us to net zero?

Battery energy storage can power us to Net Zero. Here's how |World Economic Forum The use of battery energy storage in power systems is increasing. But while approximately 192GW of solar and 75GW of wind were installed globally in 2022, only 16GW/35GWh (gigawatt hours) of new storage systems were deployed.

Can a new battery design save money?

"It is already competitive with incumbent technologies, and it can save a lot of the cost and pain and environmental issues related to mining the metals that currently go into batteries," said Mircea Dinca, the W.M. Keck Professor of Energy at MIT, referring to the new design.

Why is battery storage important?

Improving battery storage is vital if we are to ensure the power of renewable energy is fully utilised. The use-it-or-lose-it nature of many renewable energy sources makes battery storage a vital part of the global transition to clean energy. New power storage solutions can help decarbonize sectors ranging from data centres to road transport.

How can battery storage help balancing supply changes?

The ever-increasing demand for electricity can be met while balancing supply changes with the use of robust energy storage devices. Battery storage can help with frequency stability and control for short-term needs, and they can help with energy management or reserves for long-term needs.
