

In this paper, we designed an ultra-wideband solar energy absorber and approved it numerically by the finite-difference time-domain simulation. The designed solar energy absorber can achieve a high absorption ...

A group of scientists led by the Universidad Complutense de Madrid in ...

Scientists in Japan developed a 4.49%-efficient solar cell based on titanium dioxide and selenium. The device is based on a new approach aimed at reducing interfacial ...

A group of Japanese researchers have used anatase and brookite, which are two different variants of titanium dioxide, to improve the efficiency of a perovskite-based solar cell. ...

Solar energy can be utilized to generate electricity using solar panels and solar cells. This solar power is one of the major sources of renewable energy or green energy on earth. Since solar ...

In this Review, we are revealing the current and past research works executed on TiO₂-based nanostructures for enhanced photocatalytic applications. Nanosized TiO₂ ...

Titanium-based materials show promising applications in environmental remediation, photocatalytic properties, and energy sectors, particularly in dye-sensitized solar ...

Suqian Titanium Wing Technology solar project (2.35GW) is an operating solar photovoltaic (PV) farm in Suqian ...

Solar energy is the ultimate renewable source of energy, which has no match in abundance and availability. Titanium based materials such as TiO₂, FTO and titanosilicates have the ...

200 MW solar project is expected to provide approximately 40% of Tronox's South African electricity needs and lower its worldwide scope 1 & 2 emissions by ...

This project is targeted towards developing novel, porous Ti-based nanomaterials for advanced photocatalytic applications on energy conversion and water purification. "Sustainability" is of ...

Within solar cell frameworks, TiO₂ serves multiple essential roles. It is a photoactive material crucial for transforming solar energy into electrical power. TiO₂ ...

Theoretical studies have identified cesium titanium bromide (Cs₂TiBr₆), a vacancy-ordered double perovskite, as a promising lead-free and earth-abundant candidate to ...

Titania solar cells convert sunlight directly into electricity through a process ...

Scientists in Japan developed a 4.49%-efficient solar cell based on titanium ...

Titanium dioxide (TiO_2) as a photocatalyst has been ubiquitously studied for environmental applications. Though, readily available, nontoxic, and environmentally friendly; ...

Titanium dioxide (TiO_2) is one of the most practical and prevalent photo-functional materials. Many researchers have endeavored to design several types of visible-light-responsive ...
