Are photovoltaics a good energy source?

Click here to see information from the infographic above in a table. By far the most common solar energy technology, photovoltaics are an "additive" energy source that can be used on a single home's rooftop or in a large farm producing thousands of megawatts of electricity--enough to power a midsize city.

What can I do with a degree in solar energy?

The programs consist of 40-hour workshops that focus on teaching students the practical application of photovoltaic systems, renewable energy management, solar thermal design, and more. In addition, engineers, architects, and contractors can choose to complete the necessary continuing education credits for professional licenses here.

Should solar PV be more powerful than wind?

In the context of total installed capacity by 2050, much greater capacity expansion would be needed for solar PV (8 519 gigawatts [GW]) as compared to wind (6 044 GW).<sup>2</sup> Alongside wind energy, solar PV would lead the way in the transformation of the global electricity sector.

Are photovoltaics more expensive than solar thermal power?

Photovoltaics may become more affordable as more photovoltaics move to utility scale installations. Solar thermal power, however, still has the advantage that it can store power. The technology differences are moot, however, since both solar technologies are currently much more expensive than other sources of renewable energy.

What is the future of solar energy?

The Future of Solar Energy considers only the two widely recognized classes of technologies for converting solar energy into electricity -- photovoltaics (PV) and concentrated solar power (CSP), sometimes called solar thermal) -- in their current and plausible future forms.

Are solar photovoltaic installers a good job?

According to the US Bureau of Labor and Statistics occupational outlook, the job of solar photovoltaic installers is the fastest-growing one in the United States. This makes it a good time to opt for educational programs in the field and become a well-informed part of the clean energy revolution.
